

# CIMPA IN-SERVICE LIFECYCLE MANAGEMENT

## Smart-defect

An application to detect, classify, instruct and records defects

### Customer benefits

- Automatic selection of the applicable document
- Automatic classification of the defect
- Automatic issuing of the corrective action plan
- Automatic declaration in SAP
- All technical criteria loaded in the application
- Defect classification performed on Aircraft
- All defect registered

Smart-Defect enables to efficiently manage aircraft damage and defect data, in order to optimize their processing and recording maintenance.

TODAY 60 to 80% (depending on programs) of the defects occurring in plants are identified. However, they need a long instruction to issue the acceptance notification and to implement a known repair solution.

Our application automates the instruction of recurrent defects : detection, classification, instruction, recording, recovery action...

#### REDUCED UNCERTAINTY

Save time and energy on recurrent defects instruction and focus on more added value activities

#### CLEAR WAY FORWARD

Solve non recurring defects and focus on prevention

#### ADAPTABLE

Specificities per Program, ATA, area, material

## Create a smart documentation to automate and optimize technical assessment of defects

## Our turnkey offer for specific challenges

### Maximise fleet or asset operations efficiency with our in-service support

Our in-service lifecycle offer focuses on maximising operations at optimal cost without compromising on safety. We optimise the information systems interfaces for maintenance and flight operations with end-to-end innovative solutions:

- A unique in-service solution based on advanced technological bricks assembled together to your requirements.
- Accelerating the exchange of accurate structural damage information.

These services are intended for OEM customer services, airline companies, MRO (Maintenance Repair Overhaul) companies, airports, fleet operators and asset operators.
